### **Abstract:**

*In this paper, we present the 2 - block duplication of path graphs. In this process of 2 – block duplication, we use two distinct edges for duplicating the 2- blocks  $B_i$  and  $B_j$ . The resulting graph is called the 2- block duplicated graph, denoted by  $D_G^2(B_i B_j)$ . The main focus is on path graphs and we present 2- block duplication on path graphs  $P_3, P_4, P_5, P_6$  and  $P_n$ .*

**Keywords:** AUM Block Duplication,  $l$  – block duplication, 2 – block duplication, path graph, neighborhood of a block.

**AMS classification:** 05C78.

### 1. Introduction

Graph theory is an interesting branch of Mathematics with widespread applications across disciplines such as computer science, biology, network theory, operations research and so on. One of the fundamental types of graphs studied is the path graph, which consists of vertices connected in a linear sequence by edges. Due to their simplicity and versatility, path graphs serve as a key structure in various theoretical and applied studies, including the modelling of transportation systems, molecular structures, and communication networks.

In graph theory, various transformations and operations can be performed on graphs for an in depth understanding of the characterization. One such transformation is block duplication, where a set of any two blocks within the graph is duplicated. In this paper, we focus on the operation of two block duplication within path graphs.

The block labelling technique was formulated by A. Uma Maheswari et.al. in [4] [5] [6] [7] [8] [9] [10] [11] [12] and [13]. AUM Block colouring was studied in [7] and [9]. Moreover, AUM Block Sum Prime Distance Labelling was introduced by the authors for snake families of graphs in [14]. The authors introduced the concept of block duplication in [15]. In this paper 2- block duplication of path graphs  $P_3, P_4, P_5, P_6$  and  $P_n$  is studied with suitable examples.

## 2. Preliminaries

**Block of a graph  $G$ [2]:** The graph  $G$  is said to be separable if it has at least one cut-vertex. Otherwise,  $G$  is non-separable. A maximal non separable connected subgraph of graph  $G$  is called a **block of graph  $G$** .

**Path Graph[1]:** A **Path graph  $P_n$**  is a graph whose vertices can be listed in the order  $v_1, v_2, \dots, v_n$  such that the edges are  $\{v_i v_{i+1}\}$  where  $i = 1, 2, \dots, n - 1$ .

**Definition: Neighbourhood of a block[15] :**

Let  $G$  be any Graph. The neighborhood of a block  $B$  is the set of all blocks that have a common vertex with  $B$  and it is denoted by  $N(B)$ .

**Definition: AUM Block Duplication [15]:** Let  $G$  be any Graph. **Duplication of a block  $B_i$  by an edge  $e$**  is the graph, which is obtained by adding the new edge  $e = uv$  to  $G$  and joining the vertices  $u$  and  $v$  with the vertex common to  $B_i$  and its neighboring blocks  $B_j$ .

The graph obtained after the duplication of a graph  $G$  is called block duplicated graph and it is denoted by  $D_G(B)$ .

**$l$  - block duplication [15]:** Let  $n$  be the number of blocks in a graph. Let  $l$  be any positive integer.

Duplication of  $l$  blocks by edges is called  $l$  - block duplication. After the duplication the resulting graph is called  $l$  - block duplicated graph and it is denoted by  $D_G^l(B)$ .

**Different types of duplication of  $l$  - blocks by edges [15]:**

**Type 1:** Duplication of  $l$  - blocks by same edge.

**Type 2:** Duplication of  $l$  - blocks by distinct edges.

**Type 3:** Duplication of  $l$  - blocks by allowing repeated edges for some blocks.

**Duplication of  $l$  - blocks by same edge ( $l \leq n$ )[15]:**

Let  $G$  be any Graph with  $n$  blocks. In this type  $l$  blocks are duplicated with same edge  $e$ .

**Duplication of  $l$  - blocks by distinct edges ( $l \leq n$ )[15]:**

Let  $G$  be any Graph with  $n$  blocks. In this type  $l$  blocks are duplicated by  $l$  distinct edges  $e_1, e_2, e_3, \dots, e_l$ .

**Duplication of  $l$  -blocks by allowing repeated edges for some blocks ( $l \leq n$ )[15]:**

Let  $G$  be any Graph with  $n$  blocks. In this type some blocks are duplicated with distinct edges and some blocks are duplicated with edges that has been already used.

### 3. Main results

#### 2 - block duplication of path graphs by distinct edges

In this section, consider the path graphs  $P_3, P_4, P_5, P_6$  specifically and general graph  $P_n$  for  $n > 6$ . We apply 2 - block duplication using distinct edges.

**PROPOSITION 3.1:** 2 - block duplication of  $P_3$  by distinct edges results in Duplicated graph  $D_{P_3}^2 (B_1B_2)$  (as in Figure 2).

**Proof:**

Let  $u_1, u_2, u_3$  be the vertices and  $B_1, B_2$  be the blocks of  $P_3$ .

Figure 1: Path Graph  $P_3$

Here the neighbor sets are  $N(B_1) = \{ B_2 \}$  and  $N(B_2) = \{ B_1 \}$

Let us consider the edge  $v_1w_1$  and  $v_2w_2$  for duplication of  $B_1$  and  $B_2$  respectively.

For duplication of  $B_1$ , Let us join the vertices  $v_1$  and  $w_1$  with  $u_2$  which is common to  $B_1$  and its neighbor  $B_2$ .

For duplication of  $B_2$ , Let us join the vertices  $v_2$  and  $w_2$  with  $u_2$ , which is common to  $B_2$  and its neighbor  $B_1$ .

Thus, the duplicated graph is obtained as follows

Figure 2: Duplicated graph  $D_{P_3}^2 (B_1B_2)$

**PROPOSITION 3.2:** 2 - Block duplication of  $P_4$  by distinct edges results in Duplicated graphs  $D_{P_4}^2(B_1B_2)$ ,  $D_{P_4}^2(B_1B_3)$  and  $D_{P_4}^2(B_2B_3)$  as in figure 4, 5 and 6 respectively.

**Proof:**

Let  $u_1, u_2, u_3, u_4$  be the vertices and  $B_1, B_2, B_3$  be the blocks of  $P_4$ .

Figure 3: Path Graph  $P_4$

Let us consider the edges  $v_1, w_1$  and  $v_2, w_2$  for the duplication process.

Then the possible cases for duplications are:

**Case (i): Duplication of the blocks  $B_1$  and  $B_2$ .**

$$N(B_1) = \{B_2\} \quad N(B_2) = \{B_1, B_3\}$$

Duplication of block  $B_1$  can be done as in Proposition 3.1 and duplication of block  $B_2$  can be done by joining  $v_2$  and  $w_2$  with  $u_2$ , which is common to  $B_2$  and its neighbor  $B_1$  and with  $u_3$ , which is common to  $B_2$  and its neighbor  $B_3$ .

Thus, the duplicated graph is obtained as follows,

Figure 4: Duplicated graph  $D_{P_4}^2(B_1B_2)$

**Case (ii): Duplication of the blocks  $B_1$  and  $B_3$ .**

$$N(B_1) = \{B_2\} \quad N(B_3) = \{B_2\}$$

Duplication of block  $B_1$  can be done as in Proposition 3.1. and duplication of  $B_3$  can be done by joining  $v_2$  and  $w_2$  with  $u_3$ , which is common to  $B_3$  and its neighbor  $B_2$ .

Thus, the duplicated graph is obtained as follows,

Figure 5: Duplicated graph  $D_{P_4}^2(B_1B_3)$

**Case(iii): Duplication of the blocks  $B_2$  and  $B_3$ .**

$$N(B_2) = \{B_1, B_3\} \quad N(B_3) = \{B_2\}.$$

The block  $B_2$  can be duplicated as in case (i) and the block  $B_3$  can be duplicated as in case (ii)

Thus, the duplicated graph is obtained as follows:

Figure 6: Duplicated graph  $D_{P_4}^2(B_2B_3)$

**PROPOSITION 3.3:** 2 - block duplication of  $P_5$  by distinct edges results in Duplicated graphs  $D_{P_5}^2(B_1B_2), D_{P_5}^2(B_1B_3), D_{P_5}^2(B_1B_4), D_{P_5}^2(B_2B_3), D_{P_5}^2(B_2B_4), D_{P_5}^2(B_3B_4)$  as in figure 8,9,10,11,12 and 13 respectively.

**Proof:**

Let  $u_1, u_2, u_3, u_4, u_5$  be the vertices and  $B_1, B_2, B_3, B_4$  be the block of the path graph  $P_5$ .

Let us consider the edges  $v_1 w_1$  and for the  $v_2 w_2$  for the duplication process.

Figure 7: Path Graph  $P_5$

Then the possible cases for duplications are

**Case (i): Duplication of  $B_1$  and  $B_2$**

This can be done as in case (i) of Proposition 3.2

Thus, the duplicated graph is obtained as follows:

Figure 8: Duplicated graph  $D_{P_5}^2(B_1 B_2)$

**Case (ii): Duplication of  $B_1$  and  $B_3$**

$$N(B_1) = \{B_2\} \quad N(B_3) = \{B_1, B_2\}$$

Duplication of  $B_1$  is done by joining  $v_1$  and  $w_1$  with  $u_2$ , which is common to  $B_1$  and its neighbor  $B_2$  and duplication of  $B_3$  can be done by joining  $v_2$  and  $u_2$  with  $u_3$ , which is common to  $B_3$  and its neighbor  $B_2$  and with  $u_4$ , which is common to  $B_3$  and its neighbor  $B_4$ .

Thus, the duplicated graph is obtained as follows:

Figure 9: Duplicated graph  $D_{P_5}^2(B_1 B_3)$

**Case (iii) : Duplication of  $B_1$  and  $B_4$**

$$N(B_1) = \{B_2\} \quad N(B_4) = \{B_3\}$$

Duplication of  $B_1$  can be done by joining  $v_1$  and  $w_1$  with  $u_2$  and duplication of  $B_4$  is done by joining  $v_2$  and  $w_2$  with  $u_4$ . Thus, the duplicated graph is obtained as follows,

Figure 10: Duplicated graph  $D_{P_5}^2(B_1 B_4)$

**Case (iv): Duplication of  $B_2$  and  $B_3$**

$$N(B_2) = \{B_1, B_3\} \quad N(B_3) = \{B_2, B_4\}$$

Duplication of  $B_2$  can be done by joining  $v_1$  and  $w_1$  with  $u_2$  and  $u_3$  which are common to  $B_2$  and its neighbors  $B_1$  and  $B_3$  respectively.

Duplication of  $B_3$  can be done by joining  $u_2$  and  $w_2$  with  $u_4$  which are common to  $B_2$  and its neighbors  $B_2$  and  $B_4$  respectively. Thus, the duplicated graph is obtained as follows

Figure 11: Duplicated graph  $D_{P_5}^2(B_2B_3)$

**Case (v): Duplication of  $B_2$  and  $B_4$**

$$N(B_2) = \{B_1, B_3\} \quad N(B_4) = \{B_3\}$$

Duplication of  $B_2$  can be done as in case (iv) and duplication of  $B_4$  can be done by joining  $v_2$  and  $w_2$  with  $u_4$  which is common to  $B_4$  and its neighbor  $B_3$ . Thus, the duplicated graph is obtained as follows,

Figure 12: Duplicated graph  $D_{P_5}^2(B_2B_4)$

**Case (vi): Duplication of  $B_3$  and  $B_4$**

$$N(B_3) = \{B_2, B_4\} \quad N(B_4) = \{B_3\}$$

Duplication of  $B_3$  can be done by joining both  $v_1$  and  $w_1$  with  $u_3$  and  $u_4$  which are common to  $B_3$  and its neighbors  $B_2$  and  $B_4$  respectively. Duplication of  $B_4$  is done by joining  $v_2$  and  $w_2$  with  $u_4$  which is common to  $B_4$  and its neighbor  $B_3$ .

Thus, the duplicated graph is obtained as follows:

Figure 13: Duplicated graph  $D_{P_5}^2(B_3B_4)$

**PROPOSITION 3.4:** 2 - block duplication of  $P_6$  by distinct edges results in Duplicated graphs  $D_{P_6}^2(B_1B_2), D_{P_6}^2(B_1B_3), D_{P_6}^2(B_1B_4), D_{P_6}^2(B_1B_5), D_{P_6}^2(B_2B_3), D_{P_6}^2(B_2B_4), D_{P_6}^2(B_2B_5), D_{P_6}^2(B_3B_4), D_{P_6}^2(B_3B_5)$  and  $D_{P_6}^2(B_4B_5)$  as in figure 15,16,17,18,19,20,21,22,23 and 24 respectively.

**Proof:**

Let  $u_1, u_2, u_3, u_4, u_5, u_6$  be the vertices and  $B_1, B_2, B_3, B_4, B_5$  be the block of the path graph  $P_6$ .

Figure 14: Path Graph  $P_6$

$\therefore$  The neighbor sets are  $N(B_1)=\{B_2\}, N(B_2)=\{B_1, B_3\}, N(B_3)=\{B_2, B_4\},$   
 $N(B_4)=\{B_3, B_5\}$  and  $N(B_5)=\{B_4\}$

Then the possible cases for duplications are

**Case (i): Duplication of  $B_1$  and  $B_2$ .**

Duplication of  $B_1$  can be done by joining  $v_1$  and  $w_1$  with  $u_2$ , which is common to  $B_1$  and its neighbor  $B_2$ .

Duplication of  $B_2$  can be done by adding both  $v_2$  and  $w_2$  with  $u_2$  and  $u_3$ , which are common to  $B_2$  and its neighbors  $B_1$  and  $B_3$  respectively.

Thus, the duplicated graph is obtained as follows

Figure 15: Duplicated graph  $D_{P_6}^2(B_1B_2)$

**Case (ii): Duplication of  $B_1$  and  $B_3$**

This can be done as in case (ii) of Proposition 3.3.

Thus, the duplicated graph is obtained as follows:

Figure 16: Duplicated graph  $D_{P_6}^2(B_1B_3)$

**Case (iii): Duplication of  $B_1$  and  $B_4$**

Duplication of  $B_1$  is done by joining  $v_1$  and  $w_1$  with  $u_2$ , which is common to  $B_1$  and its neighbor  $B_2$ . Duplication of  $B_4$  is done by joining both  $v_2$  and  $w_2$  with  $u_4$  and  $u_5$  which are common to  $B_4$  and its neighbors  $B_3$  and  $B_5$  respectively.

Thus, the duplicated graph is obtained as follows:

Figure 17: Duplicated graph  $D_{P_6}^2(B_1B_4)$

**Case (iv): Duplication of  $B_1$  and  $B_5$**

Duplication of  $B_1$  is done by adding  $v_1$  and  $w_1$  with  $u_2$  and duplication of  $B_5$  is done by adding  $v_2$  and  $w_2$  with  $u_5$ .

Thus, the duplicated graph is obtained as follows:

Figure 18: Duplicated graph  $D_{P_6}^2(B_1B_5)$

**Case (v): Duplication of  $B_2$  and  $B_3$**

This can be done as in case (iv) of Proposition 3.3.

Thus, the duplicated graph is obtained as follows:

Figure 19: Duplicated graph  $D_{P_6}^2(B_2B_3)$

**Case (vi): Duplication of  $B_2$  and  $B_4$**

Duplication of the block  $B_2$  can be done by joining both  $v_1$  and  $w_1$  with the vertices  $u_2$  and  $u_3$  which are common to block  $B_2$  and its neighbors  $B_1$  and  $B_3$  respectively.

Duplication of the block  $B_4$  can be done by joining both  $v_2$  and  $w_2$  with the vertices  $u_4$  and  $u_5$  which are common to  $B_4$  and its neighbors  $B_3$  and  $B_5$  respectively.

Thus, the duplicated graph is obtained as follows:

Figure 20: Duplicated graph  $D_{P_6}^2(B_2B_4)$

**Case (vii): Duplication of  $B_2$  and  $B_5$**

Duplication of  $B_2$  can be done as in case (vi) duplication of  $B_5$  done by joining  $v_2$  and  $w_2$  with  $u_5$ , which is common to  $B_5$  and its neighbor  $B_4$ .

Thus, the duplicated graph is obtained as follows:

Figure 21: Duplicated graph  $D_{P_6}^2(B_2B_5)$

**Case (viii): Duplication of  $B_3$  and  $B_4$**

Duplication of  $B_3$  can be done by joining both  $v_1$  and  $w_1$  with the vertices  $u_3$  and  $u_4$  which are common to the block  $B_3$  and its neighbors  $B_2$  and  $B_4$  respectively.

Duplication of  $B_4$  is done as in case (vi) thus the duplicated graph is obtained as follows

Figure 22: Duplicated graph  $D_{P_6}^2(B_3B_4)$

**Case (ix): Duplication of  $B_3$  and  $B_5$**

Duplication of  $B_3$  can be done as in case (viii). Duplication of  $B_5$  is done as in case (vii)

Figure 23: Duplicated graph  $D_{P_6}^2(B_3B_5)$

**Case (x): Duplication of  $B_4$  and  $B_5$**

Duplication of  $B_4$  can be done as in case (vi) and duplication of  $B_5$  can be done as in case (vi).

Thus, the duplicated graph is obtained as follows:

Figure 24: Duplicated graph  $D_{P_6}^2(B_4B_5)$

**PROPOSITION 3.5:** 2 - block duplication of  $P_n$  by distinct edges results in Duplicated graphs  $D_{P_n}^2(B_1B_i)$  ( $2 \leq i \leq n - 2$ ),  $D_{P_n}^2(B_1B_{n-1})$ ,  $D_{P_n}^2(B_iB_j)$ , ( $2 \leq i \leq n - 2$ ) ( $2 \leq j \leq n - 2$ ) and  $D_{P_n}^2(B_iB_n)$  ( $2 \leq i \leq n - 2$ ) as in figure 26,27,28 and 29 respectively.

**Proof:**

Let  $u_1, u_2, u_3, u_4, u_5, u_6, \dots, u_n$  be the vertices and  $B_1, B_2, B_3, B_4, B_5, \dots, B_{n-1}$  be the blocks of the path graph  $P_n$ .

Figure 25: Path Graph  $P_n$

$\therefore$  The neighbor sets are  $N(B_1) = \{B_2\}$ ,  $N(B_i) = \{B_{i-1}, B_{i+1}\}$  for  $2 \leq i \leq n - 2$   
and  $N(B_{n-1}) = \{B_{n-2}\}$

Then the possible cases for duplications are

**Case (i): Duplication of  $B_1$  and  $B_i$  (for  $2 \leq i \leq n - 2$ ).**

Duplication of  $B_1$  can be done by joining  $v_1$  and  $w_1$  with  $u_2$ , which is common to  $B_1$  and its neighbor  $B_2$ .

Duplication of  $B_i$  can be done by adding both  $v_2$  and  $w_2$  with  $u_i$  and  $u_{i+1}$ , which are common to  $B_i$  and its neighbors  $B_{i-1}$  and  $B_{i+1}$  respectively.

Thus, the duplicated graph is obtained as follows:

Figure 26: Duplicated graph  $D_{P_n}^2(B_1 B_i)$

**Case (ii): Duplication of  $B_1$  and  $B_{n-1}$**

Duplication of  $B_1$  is done by adding  $v_1$  and  $w_1$  with  $u_2$  and duplication of  $B_{n-1}$  is done by adding  $v_2$  and  $w_2$  with  $u_{n-1}$ .

Thus, the duplicated graph is obtained as follows

Figure 27: Duplicated graph  $D_{P_n}^2(B_1 B_{n-1})$

**Case (iii): Duplication of  $B_i$  (for  $2 \leq i \leq n - 2$ ) and  $B_j$  (for  $2 \leq j \leq n - 2$ )**

Duplication of  $B_i$  can be done as in case (i).

Duplication of  $B_j$  can be done by adding both  $v_2$  and  $w_2$  with  $u_j$  and  $u_{j+1}$ , which are common to  $B_j$  and its neighbors  $B_{j-1}$  and  $B_{j+1}$  respectively.

Thus, the duplicated graph is obtained as follows:

Figure 28: Duplicated graph  $D_{P_n}^2(B_i B_j)$

**Case (iv): Duplication of  $B_i$  (for  $2 \leq i \leq n - 2$ ) and  $B_{n-1}$**

Duplication of  $B_i$  can be done as in case (i). duplication of  $B_{n-1}$  is done by adding  $v_2$  and  $w_2$  with  $u_{n-1}$ . Thus, the duplicated graph is obtained as follows:

Figure 29: Duplicated graph  $D_{P_n}^2(B_i B_{n-1})$

### Conclusion:

In this paper, we have investigated 2 – block duplication in path graphs, providing suitable examples, wherever necessary. There is a scope for extending the results to other families of graphs with applications to various fields like transportation management, network problems, decision making etc.,
